

IVO Water Management Policy

1. Save water and use water resources reasonably
2. Strengthen waste reduction at the source and pollution prevention
3. Make good use of resource recycling and continue to promote clean production
4. Save water, eliminate the phenomenon of "running, emitting, dripping, and leaking", and improve water efficiency
5. Reduce wastewater discharge and improve wastewater reuse rate
6. Actively promote new technology, new process, new material, and new equipment, gradually eliminate outdated technologies and processes with high water consumption, and reduce the water consumption per unit product
7. Provide safe and reliable drinking water, and use water-saving sanitation facilities
8. Actively cooperate with government units (including water company and sewage treatment plant) to reduce pollutant emissions and improve the environment

Relevant data on factory water consumption, drainage, wastewater pollutant, etc. have been disclosed in [IPE](https://www.ipe.org.cn/)
